

Fury® Knocks 'em down Keeps 'em down

Features & benefits

- Broad spectrum – controls ants, spiders, cockroaches and more
- Rapid knock down for immediate results
- Longer residual when tested against comparative products*
- Opportunity to eliminate call backs
- Two trusted active ingredients – Bifenthrin and Alpha-cypermethrin
- Unsurpassed Customer Satisfaction

Product description

Fury 120 SC is a water based Suspension Concentrate (SC) formulation containing two well known synthetic pyrethroids; Bifenthrin (80 g/L) and Alpha-cypermethrin (40 g/L).

Fury 120 SC was specifically formulated to create a superior, longer lasting general insecticide that works in two powerful ways to rid your clients of general household pests. Fury's power and strength comes from a patent protected, optimised formula of alpha-cypermethrin and bifenthrin. Alpha-cypermethrin provides Fury's superior knock down power whilst the established strength of bifenthrin ensures a longer residual control period.

Where to use

Fury 120 SC is registered for internal and external areas in domestic, commercial, public and industrial buildings and structures. It may be applied as an internal surface spray to treat harbourage sites of ants, cockroaches, spiders and silverfish. It can also be used on external surfaces to treat resting sites of spiders, flies, mosquitoes and midges.

Fury 120 SC is registered for the treatment of fleas in carpets and pet bedding, hiding places of bed bugs such furniture, fittings, beddings, carpets and clothes, and for direct nest treatment of paper nest wasps.

How to use

Fury 120 SC can be applied as a low pressure coarse droplet spray using most conventional spray equipment. It should be applied to surfaces frequented by target pests or as a stream into cracks and crevices where pests hide and rest. Surfaces should be sprayed to the point of run-off but not beyond to ensure thorough coverage. Where a rate range is described, use the higher rate for initial or knockdown sprays. The lower rate is offered to cater for follow-up sprays or maintenance treatments where pest pressure is reduced and total product required is lower. Do not use at a lower rate than the situation or pest require.

**Only for
Professionals**

*Summary Results Reference Trials: Agrisearch 2010/2013-Fury 12.5 ml/L, Cislis 6 ml/L, Temprid 10 ml/L, Demand 16 ml/L

Fury Directions for Use

SITUATION	PEST	RATE	CRITICAL COMMENTS
Internal and external areas of Domestic, Commercial, Public and Industrial buildings and structures	Ants (excluding red imported fire ants)	Initial treatment 125 mL/10 L Maintenance treatment 75 mL/10 L	To control ants and cockroaches: Apply as a coarse low pressure spray to ensure thorough coverage of surfaces where pests hide, frequent & rest. Spray to the point of run-off, but do not exceed "the point of runoff". As a guide Use approximately 5 L per 100 m ² , for non-absorptive surfaces, and 10 L per 100 m ² , for absorptive surfaces.
	Cockroaches	Initial treatment 150 mL/10 L Maintenance treatment 100 mL/10 L	
	Flies & Mosquitoes	Initial treatment 125 mL/10 L Maintenance treatment 75 mL/10 L	To control Biting midges, flies and mosquitoes: Apply to indoor and outdoor surfaces, as a coarse low pressure spray, ensuring good coverage and wetting of all surfaces. Treat all areas where insects rest or harbour. Use the higher rate where pest pressure is severe and where rapid knockdown and/or residual protection is desired and use the lower rate for maintenance applications. Use 5 L per 100 m ² for non-absorptive surfaces and 10 L of per 100 m ² for absorptive surfaces. Silverfish: Remove all infested and non-infested material, including books, paper and/or clothing from shelves or storage spaces before treatment. Clean or treat all affected material and storage sites, before repacking/ storing.
	Biting midges	Initial treatment 125 mL/10 L Maintenance treatment 60 mL/10 L	
	Silverfish	Initial treatment 150 - 250 mL/10 L Maintenance treatment 75 - 125 mL/10 L	
	Fleas	75 mL to 125 mL/10 L	Fleas: Before application remove pets, companion animals, fish and their feeding bowls etc., and thoroughly vacuum all indoor areas including furniture and fittings to gain maximum access to flea harbourage. Use higher rate for rapid knockdown and maximum residual protection. Treat reinfestation as necessary.
	Clothes moths	25 to 50 mL/10 L	Clothes moths rest and harbour in dark, undisturbed areas, such as under carpets, under furniture and in cupboards, chests and closets where clothing and other materials have been stored undisturbed for long periods. Remove clothing and other items from these areas and clean or vacuum before treating. Removed items should be inspected and where necessary cleaned and/or treated before being returned to storage.
	Papernest Wasp	75 mL/10 L	Papernest wasps: Apply the prepared emulsion directly to the nest, ensuring thorough coverage to the point-of-runoff. When all adult wasps have been knocked down, the nest may be safely removed from the structure.
	Bed bugs	75 mL/10 L	Pest Managers should familiarise themselves with the bedbug CODE of PRACTICE.
	Spiders	Initial treatment 125 mL/10 L Maintenance treatment 75 mL/10 L	Apply to areas where spiders hide, frequent and rest. Spray to the point of run-off using approximately 5 L of spray mixture per 100 m ² .
